Rodent Poison and Our Wildlife

What you should know. Research shows that anticoagulant rodenticide, commonly referred to as rat poisons, meant to control (kill) rodents, are also killing our native wildlife.

How? Rodents do not die in the bait boxes used to poison them. Instead, the poisoned rodents leave the box and move around the environment for several days before they die. These toxic rodents are easily caught and eaten by our wildlife and the poisons pass up the food chain, leading to the death of many wild animals such as hawks, owls, bobcats, foxes, and even mountain lions.

The pictures on the right show examples of poison bait boxes found around businesses, schools, residences, and restaurants. Is wildlife at risk in your community?

To control rodents without poison, use traps and remove the resources that attract them such as food, water, and shelter.
- Use mechanical traps such as capture, snap, and electronic traps.
- If you choose to hire a company to assist you, make sure they perform rodent exclusion techniques rather than pest control.

Prevent access into houses or buildings
- Seal all holes, gaps, and crevices that allow access into businesses, homes, garages, attics, and crawl spaces.
- Use 1/4 inch metal mesh or metal flashing to seal up entry points and steel wool from small holes.
- Keep hedges and bushes away from buildings.
- Remove tree limbs within three feet of roofs and buildings.

Remove rodent food sources
- Prevent access to fruiting trees and gardens.
  - Trim fruit tree branches two to three feet away from fences and wires.
  - Secure metal band (36” tall) around fruit trees trunks to prevent climbing.
- Prevent access to bird feeders and fallen bird seed.
- Feed pets inside and secure trash and compost bins.
- Keep trash and recycling areas clean and bins covered.
- Replace trash cans and dumpsters with holes.

Remove rodent shelter
- Remove ivy and trim thick vegetation.
- Remove wood and debris piles.
- Seal up under decks (use 1/4 metal wire or solid panels).

Help Stop This Toxic Food Chain
You and your community can make a difference! Take action and stop the use of rodent poison at home, at school, and in your community.

90% of bobcats tested during an NPS study in LA and Ventura Counties had rodent poisons in their systems.
Seal Up House

Getting Started: A Home Checklist

Yard Modifications

Tools

Tools

Seal Up House

Yard Modifications

1/4 inch wire/staple gun or washer and screws
1/4 inch wire
Secured board
1/4 inch wire, bury under ground
Metal flashing, 1/4 inch wire/foam/steel wool
Weather stripping/threshold
Weather stripping
1/4 inch wire
1/4 inch wire/tile plugs

Yard Modifications
